Project: Quiemuth Village Mixed Use Fee-to-Trust Project

Date: 3/10/2023

1.0 INTRODUCTION

This memorandum has been prepared for the Nisqually Indian Tribe for the Quiemuth Village Mixed Use Fee-to-Trust Project (Proposed Project) located in Thurston County, in the City of Lacey, WA on an approximate 172.4-acre Project Site (Project Site). The Project Site is north of I-5 and accessible from Marvin Road, Britton Parkway, and Gateway Boulevard. The Proposed Project consists of a Fee-to-Trust acquisition of the Project Site and anticipated mixed-use development. The purpose of this assessment is to identify sensitive biological resources that could occur within Project Site boundaries and be affected by the Proposed Project.

2.0 METHODOLOGY

The following information was obtained and reviewed:

- Washington Department of Fish and Wildlife (WDFW) Priority Habitat and Species viewer (PHS), dated April 15, 2022, of special-status species with the potential to occur on or be affected by the Proposed Project (WDFW, 2022a; **Attachment A**);
- Washington Natural Heritage Program *2021 Washington Vascular Plant Species of Conservation*;
- Burke Herbarium *Plants of Washington Identification Key* (Giblin and Legler, 2003);
- USFWS National Wetlands Inventory (NWI) map of wetland features on the Action Area (USFWS, 2022a; **Attachment B**);
- A custom soils report from the Natural Resources Conservation Service (NRCS) (NRCS, 2022; **Attachment C**); and
- A map of the nearest critical habitat (USFWS, 2022b).

A biological resources survey was conducted of the Project Site on April 12 to 14 and June 16 to 18, 2021. The survey was conducted by walking throughout the entirety of the Project Site. Surveys assessed habitat types, wetlands and waters of the U.S., federal and state listed species, and suitable habitat for

listed species. Species and habitat types were classified using the WDFW Priority Habitat and Species list and *The Jepson Manual* (Baldwin, 2012). Data was collected via a Trimble Geo XH hand-held GPS receiver. Habitat requirements of special-status species were compared to habitats observed, which were determined based on aerial photographs, ground-truthing, and background data review.

3.0 ENVIRONMENTAL SETTING

The Project Site is located on the Lacey United States Geological Survey (USGS) 7.5' quadrangle maps (**Figures 1, 2, and 3**) within an area of minimal flood hazard (FEMA, 2022). The Project Site is disturbed as a result of historical logging, thinning, and gravel extraction. On-site elevations range from 55 meters to 70 meters above mean sea level. Soils, habitats, and special-status species are discussed herein.

3.1 SOIL TYPES

A custom soils report for the Project Site can be found in **Attachment C**. Soil types are summarized below:

- Alderwood gravelly sandy loam is derived from glacial parent material. It is moderately well drained, non-hydric, and considered prime farmland if irrigated.
- Everett very gravelly sandy loam is derived from sandy and gravelly glacial outwash. It is somewhat excessively drained, non-hydric, and is farmland of statewide importance.
- Indianola loamy sand is derived from sandy glacial outwash parent material. It is somewhat excessively drained, non-hydric, and considered prime farmland if irrigated.
- Spanaway gravelly sandy loam is derived from volcanic ash over gravelly outwash parent material. It is somewhat excessively drained, non-hydric, and considered prime farmland if irrigated.

3.2 HABITAT TYPES

Two habitat types were identified within the Project Site (**Figure 4**): ruderal/disturbed and mixed conifer – hardwood forest. The majority of the Project Site is heavily disturbed as a result of historical logging, thinning, and gravel extraction. It is now interspersed with forest stands. Ruderal/disturbed areas are a mixture of barren gravelly soils, shrubs, and weedy herbaceous cover. Scotch broom (*Cytisus scoparius*), oxeye daisy (*Leucanthemum vulgare*), foxglove (*Digitalis purpurea*), blackberry (*Rubus spp.*), and common St. John's wort (*Hypericum perforatum*) were common species. Mixed conifer – hardwood stands are sparse in the southern section of the Project Site. This habitat is comprised of Douglas fir (*Pseudotsuga menziesii*) and Oregon white oak (*Quercus garryana*). The understory is comprised of a mix of native and non-native weedy species, including blackberry, oceanspray (*Holodiscus discolor*), salal (*Gaultheria shallon*), hardhack (*Spiraea douglasii*) and Bermuda grass (*Cynodon dactylon*). A list of species observed during the April and June surveys is included in **Attachment D**.

Background review of the NWI database did not indicate the presence of any wetlands, waters of the U.S., or other aquatic features (**Attachment B**), though wetlands had previously been delineated within the Action Area (Chad Armour, 2013). Previous surveys conducted in November 2012 mapped eleven wetlands throughout the north section of the Action Area. The United States Army Corp of Engineers (USACE) determination of this previous delineation concluded that the wetlands were not jurisdictional but may still be under the purview of the Washington State Department of Ecology. This jurisdictional

determination was valid for five years and has since lapsed. Previously mapped wetlands were assessed during the 2021 site visit. Eight of the eleven previously mapped wetlands sites were able to be identified. Three wetland sites were not present and there were no indicators to suggest previous presence of these wetlands. The eight identifiable wetlands sites were disturbed with most occurring in obvious excavation pits, cuts, or similar features disturbed by heavy machinery. None of the previously mapped wetlands met required parameters (i.e., hydric soils, hydrophytic vegetation, and hydrology) to qualify as a wetland (USACE, 2008).

3.3 SPECIAL-STATUS SPECIES

Background data review and special-status species searches list 27 special-status plant species and 6 special-status wildlife species with the potential to occur in the region of the Project Site (**Attachment A**). State listed species are evaluated herein; federally listed species are addressed in the accompanying Biological Assessment (BA). The name, regulatory status, distribution, habitat requirements, period of identification, and potential to occur for each species are listed in **Table 1**.

Based on the site-specific habitats and special-status species habitat requirements, the Project Site contains suitable habitat to potentially support 11 special-status plant species and two special-status animal species. These species include tall bugbane (*Actaea elata* var. *elata*), tall agoseris (*Agoseris elata*), western wahoo (*Euonymus occidentalis* var. *occidentalis*), large St. Johns' wort (*Hypericum majus*), Pacific peavine (*Lathyrus vestitus* var. *ochropetalus*), Puget groundsel (*Packera macounii*), salmon Jacob's-ladder (*Polemonium carneum*), Scouler's catchfly (*Silene scouleri* ssp. *scouleri*), small-flowered trillium (*Trillium albidum* ssp. *parviflorum*), whipplevine (*Whipplea modesta*), narrow-leaf mule's-ears (*Wyethia angustifolia*), Oregon vesper sparrow (*Pooecetes gramineus affinis*), and western gray squirrel (*Sciurus griseus*). Species with no potential to occur on the Project Site were ruled out based on lack of suitable habitat, soils, elevation, and necessary substrate. Special-status plant surveys were conducted during the appropriate bloom period for each potentially occurring species. No mounds were observed which may indicate presence of pocket gopher. No special-status plant or animal species were observed during the site visits.

3.4 WILDLIFE MOVEMENT

Wildlife movement is currently restricted through the Project Site by surrounding urban development. I-5 bounds the Project Site to the south, aggregate mining operations to the west, and the Britton Parkway/Marvin Road interchange to the north and east. No wildlife corridors were observed connecting the Project Site to off-site habitats when surveyed.

3.5 CRITICAL HABITAT

There is no designated critical habitat on the Project Site. The nearest designated critical habitat occurs approximately 3.0 miles east of the Project Site for bull trout.

TABLE 1
REGIONALLY OCCURRING SPECIAL-STATUS SPECIES

SCIENTIFIC NAME COMMON NAME	FEDERAL/STATE /CNPS LIST	DISTRIBUTION	HABITAT REQUIREMENTS	PERIOD OF IDENTIFICATION	POTENTIAL TO OCCUR ON-SITE
PLANTS					
<i>Actaea elata</i> var. <i>elata</i> Tall bugbane	--/WS/--	Known to occur west of the Cascades crest and in the Columbia River Gorge.	Found in moist, shady woods at lower elevations.	June-August	Yes , may occur in mixed conifer-hardwood habitat on the Project Site.
<i>Agoseris elata</i> Tall agoseris	--/WS/--	Known to occur on both sides of the Cascades crest in Washington.	Found in meadows and open woods from valleys to middle elevations in the mountains.	June-July	Yes , may occur in mixed conifer-hardwood habitat on the Project Site.
<i>Cicuta bulbifera</i> Bulb-bearing water-hemlock	--/WS/--	Known to occur in scattered locations on both sides of the Cascades crest in Washington.	Found in marshes, bogs, wet meadows and standing water from lowlands to mountain valleys.	July-September	No , suitable habitat not present to support this species.
<i>Cirsium remotifolium</i> var. <i>remotifolium</i> Weak thistle	--/WE/--	Known to occur west of the Cascades crest and east in the Columbia River Gorge in Washington.	Found in meadows, stream banks, open forest, and brushy slopes from low to middle elevations in the mountains.	June-September	No , suitable habitat not present to support this species.
<i>Erythronium revolutum</i> Coast fawn-lily	--/WS/--	Known to occur west of the Cascades crest in Washington.	Found along river banks and the edge of woods, in open areas or in moderate shade.	April-May	No , suitable habitat not present to support this species.
<i>Euonymus occidentalis</i> var. <i>occidentalis</i> Western wahoo	--/WS/--	Known to occur west of the Cascades crest in southwestern Washington.	Found in moist woods at low to middle elevations.	May-June	Yes , may occur in mixed conifer-hardwood habitat on the Project Site.
<i>Githopsis specularioides</i> Common bluecap	--/WS/--	Known to occur on both sides of the Cascades in Washington.	Found in dry, open places in the valleys and foothills.	May-June	No , suitable habitat not present to support this species.
<i>Heterotheca oregona</i> Oregon goldenweed	--/WS/--	Known to occur east of the base of the Cascades to the coast in Washington.	Found in sand and gravel bars along rivers from low to moderate elevations.	June-September	No , suitable habitat not present to support this species.

SCIENTIFIC NAME COMMON NAME	FEDERAL/STATE /CNPS LIST	DISTRIBUTION	HABITAT REQUIREMENTS	PERIOD OF IDENTIFICATION	POTENTIAL TO OCCUR ON-SITE
<i>Howellia aquatilis</i> Water howellia	--/WT/--	Known to occur west of the Cascades in Washington.	Found in ponds and lakes.	May-July	No , suitable habitat not present to support this species.
<i>Hypericum majus</i> Large St. Johns' wort	--/WS/--	Known to occur throughout Washington.	Found in areas with wet ground.	June-August	Yes , may occur in mixed conifer-hardwood habitat on the Project Site.
<i>Isoetes nuttallii</i> Nuttall's quillwort	--/WS/--	Known to occur in western Washington.	Found in seasonal wetland and temporary stream habitats.	May-June (when spores mature)	No , suitable habitat not present to support this species.
<i>Lathyrus vestitus</i> var. <i>ochropetalus</i> Pacific peavine	--/WE/--	Known to occur in Thurston, King, Lewis, and Cowlitz counties.	Found in moist woodlands, open slopes, and roadsides.	April-June	Yes , may occur in mixed conifer-hardwood or ruderal habitat on the Project Site.
<i>Leptosiphon minimus</i> True babystars	--/WT/--	Known to occur west of the Cascades crest in Washington in the Puget Trough lowlands.	Found in prairies, balds, and open, grassy, rocky areas near the coast.	May-June	No , suitable habitat not present to support this species.
<i>Nuttallanthus texanus</i> Large-flowered blue toadflax	--/WS/--	Known to occur west of the Cascades crest in Washington.	Found in prairies, grasslands, and balds.	May-June	No , suitable habitat not present to support this species.
<i>Packera macounii</i> Puget groundsel	--/WS/--	Known to occur west of the Cascades crest in Washington.	Found in open woods and dry, open places at low elevations.	May-July	Yes , may occur in mixed conifer-hardwood or ruderal habitat on the Project Site.
<i>Pityopus californicus</i> California pinefoot	--/WS/--	Known to occur in western Washington.	Found in mature, moist and shaded mixed-conifer or conifer forests at elevations up to 1,800 meters.	June-July	No , mature forest stands are not present on the Project Site.
<i>Polemonium carneum</i> Salmon Jacob's-ladder	--/WT/--	Known to occur in the Olympic and Grays Harbor region of Washington.	Found in thickets, woodlands, and forest openings. Elevations range from near sea level to moderate elevations in mountain areas.	May-July	Yes , may occur in mixed conifer-hardwood habitat on the Project Site.
<i>Polystichum californicum</i> California sword-fern	--/WS/--	Known to occur west of the Cascades crest in Washington.	Found in moist forest understory, streambanks, and rocky opens slopes at low elevations.	May-August (once sori develop)	No , suitable habitat not present to support this species.

SCIENTIFIC NAME COMMON NAME	FEDERAL/STATE /CNPS LIST	DISTRIBUTION	HABITAT REQUIREMENTS	PERIOD OF IDENTIFICATION	POTENTIAL TO OCCUR ON-SITE
<i>Sericocarpus rigidus</i> Columbia white-topped aster	--/WS/--	Known to occur west of the Cascades crest in lowland Washington.	Found in prairies and open areas at low elevations.	July-August	No , suitable habitat not present to support this species.
<i>Sidalcea virgata</i> Rose checkermallow	--/WS/--	Known to occur in Thurston County.	Found in moist prairies and meadows at low elevations.	April-June	No , suitable habitat not present to support this species.
<i>Silene scouleri</i> ssp. <i>scouleri</i> Scouler's catchfly	--/WS/--	Known to occur on both sides of the Cascades crest in Washington.	Found in prairies and forest openings; rarely montane.	June-August	Yes , may occur in mixed conifer-hardwood habitat on the Project Site.
<i>Spiranthes diluvialis</i> Ute ladies'-tresses	--/WE/--	Known to occur east of the Cascades crest in Washington.	Found in moist to wet meadows, marshes, and riparian areas.	July-September	No , suitable habitat not present to support this species.
<i>Trillium albidum</i> ssp. <i>parviflorum</i> Small-flowered trillium	--/WS/--	Known to occur west of the Cascades crest in Washington.	Found in moist forests, oak-ash woodlands, thickets, and fields at low elevations.	March-May	Yes , may occur in mixed conifer-hardwood habitat and open areas on the Project Site.
<i>Symphyotrichum hallii</i> Hall's aster	--/WS/--	Known to occur west of the Cascades crest in Washington.	Found in dry, open places in the valleys and plains.	July-October	No , suitable habitat not present to support this species.
<i>Whipplea modesta</i> Whipplevine	--/WS/--	Known to occur on the Olympic Peninsula in Washington.	Found in dry, rocky, open to lightly forested areas.	April-June	Yes , may occur in mixed conifer-hardwood habitat on the Project Site.
<i>Woodwardia fimbriata</i> Chain-fern	--/WS/--	Known to occur west of the Cascades crest in lowland western Washington.	Found in mixed conifer and mixed conifer- hardwood forests, in moist habitat including stream banks, springs, and seepy rocky outcrops.	May-August (once sori develop)	No , suitable habitat not present to support this species.
<i>Wyethia angustifolia</i> Narrow-leaf mule's- ears	--/WS/--	Known to occur west of the Cascades crest in southwestern Washington.	Found in meadows and moist, open hillsides at low elevations.	May-July	Yes , may occur in open areas on the Project Site.

SCIENTIFIC NAME COMMON NAME	FEDERAL/STATE /CNPS LIST	DISTRIBUTION	HABITAT REQUIREMENTS	PERIOD OF IDENTIFICATION	POTENTIAL TO OCCUR ON-SITE
ANIMALS					
Amphibians					
<i>Anaxyrus boreas</i> Western Toad	--/WC/--	Known to occur in all nine Washington ecoregions being abundant in some areas and declining in others.	Found in prairies, forests, canyon grasslands, and ponderosa pine-Oregon oak habitats. Breeding waters are permanent and include wetlands, ponds, lakes, reservoir covers, and river edges.	April- June	No , suitable habitat not present to support this species.
Birds					
<i>Poocetes gramineus affinis</i> Oregon Vesper Sparrow	--/WE/--	Known to occur in western Washington in Pierce and Thurston Counties.	Found in open habitats such as grassland, shrub-steppe, and agricultural areas. Require dry, open landscapes for nesting.	April- September	Yes , may occur in ruderal habitat on the Project Site.
Fish					
<i>Clupea pallasii</i> Pacific Herring (Georgia Basin DPS)	--/WC/--	Known to occur in Puget Sound.	Found in marine shorelines.	Year-round	No , suitable habitat not present to support this species.
<i>Novumbra hubbsi</i> Olympic Mudminnow	--/WS/--	Known to occur in the southern and coastal drainages of the Olympic Peninsula, the Chehalis River basin, south Puget Sound west of the Nisqually River, and in Snohomish and King counties.	Found in slow-moving streams, wetlands, and ponds with a muddy bottom, little or no water flow, and aquatic vegetation.	Year-round	No , suitable habitat not present to support this species.
Mammals					
<i>Sciurus griseus</i> Western Gray Squirrel	--/WT/--	In Washington, this species occupies oak woodlands and conifer forests in Klickitat and Yakima Counties, low to mid-elevation conifer forests in Okanogan and Chelan Counties, and oak woodlands and conifer forests in Pierce and Thurston Counties. The North Cascades population is the only one living outside the range of Oregon white oak in Washington	Pine trees and oak trees are preferred for cover, foraging, and natal dens. In Washington, they will also use mixed Douglas fir-oak-pine habitats. Require a diverse selection of vegetation for multiple food sources.	Year-round	Yes , may occur in mixed conifer-hardwood habitat of the Project Site.

SCIENTIFIC NAME COMMON NAME	FEDERAL/STATE /CNPS LIST	DISTRIBUTION	HABITAT REQUIREMENTS	PERIOD OF IDENTIFICATION	POTENTIAL TO OCCUR ON-SITE
Reptiles					
<i>Emys marmorata</i> western pond turtle	--/WT/--	Distribution ranges from Washington to northern Baja California.	Inhabit rivers, streams, lakes, ponds, reservoirs, stock ponds, and permanent wetland habitats with basking sites.	Year-round	No , suitable habitat not present to support this species.

STATUS CODES:

STATE: Washington Department of Fish and Wildlife

WE Washington Listed Endangered

WT Washington Listed Threatened

WS Washington Listed Sensitive

4.0 RESULTS AND RECOMENDATIONS

4.1 SENSITIVE HABITAT

Habitat types on the Project Site include ruderal/disturbed and mixed conifer-hardwood forest. The majority of the Project Site consists of ruderal/disturbed habitat with the north and south borders consisting of mixed conifer-hardwood forest. These habitat types are not identified as priority habitats by WDFW and are not afforded protection by a federal agency; thus, these habitats are not considered sensitive. Additionally, previously mapped wetlands were determined to either be absent or do not qualify as a wetland per the USACE three-parameter criteria (USACE, 2008). There would be no impact to sensitive habitat.

4.2 NESTING MIGRATORY BIRDS

Migratory birds and their nests are protected from “take” by the Migratory Bird Treaty Act (16 U.S.C. 703-711), which makes it unlawful to “...pursue, hunt, take, capture, kill, attempt to take, capture or kill, possess or any part, nest, or egg of any such bird...” (50 CFR 10). Potentially occurring nesting migratory birds (including streaked horned lark and Oregon vesper sparrow) within 500 feet of the Project Site could be affected if vegetation removal or loud noise-producing activities associated with construction occur during the general nesting season (February 15 through September 15). **Mitigation Measure 1** is recommended to reduce potential impacts to nesting migratory birds.

Mitigation Measure 1

- If construction activities (e.g., building, grading, ground disturbance, removal of vegetation) are scheduled to occur during the general nesting season (February 15 - September 15), a preconstruction nesting bird survey shall be conducted by a qualified biologist throughout accessible areas of suitable habitat within 500 feet of proposed construction activity. The survey shall occur no more than 7 days prior to the scheduled onset of construction. If construction is delayed or halted for more than 7 days, another preconstruction survey for nesting bird species shall be conducted. If no nesting birds are detected during the preconstruction survey, no additional surveys or mitigation measures are required.
- If nesting bird species are observed within 500 feet of construction areas during the survey, appropriate “no construction” buffers shall be established. The size and scale of nesting bird buffers shall be determined by a qualified biologist and shall be dependent upon the species observed and the location of the nest. Buffers shall be established around active nest locations. The nesting bird buffers shall be completely avoided during construction activities. The buffers may be removed when the qualified wildlife biologist confirms that the nest is no longer occupied, and all birds have fledged.

4.3 SPECIAL-STATUS SPECIES

Based on survey observations and site characteristics, the Project Site contains suitable habitat to support 11 special-status plant species and two special-status animal species (**Table 1**). No special-status species were observed. The April and June surveys were conducted during the appropriate bloom periods for the 11 special-status plants with the potential to occur on the Project Site. No special-status plants were observed during the surveys; thus, there would be no impact to special-status plants.

Although western gray squirrel was not observed at the time of survey, the Project Site contains suitable

habitat, including mixed conifer-hardwood habitat for this species. However, this species' current range is limited to three populations within the state of Washington (Linders et al., 2010). The nearest population is located in Pierce County, approximately 14 miles from the Project Site. WDFW PHS identifies observations outside of the current range, including observations within Thurston County. With implementation of **Mitigation Measure 2**, the Proposed Project would have a less than significant impact on western gray squirrel.

Mitigation Measure 2

- If tree removal is to occur within the mixed conifer-hardwood habitat on the Project Site, a preconstruction survey for western gray squirrel shall be conducted by a qualified biologist. The survey shall be conducted in accordance with WDFW's survey protocol for nest sites (Vander Haegen et al., 2004).
- If an active western gray squirrel nest is observed a 50-foot no-cut buffer shall be established around each nest tree. A 400-foot no-disturbance buffer shall be established for all active nest trees during the western gray squirrel breeding season (1 March – 30 September). Nest site locations shall be documented and flagged.

4.4 WILDLIFE MOVEMENT

Wildlife movement is restricted by surrounding urban development. No wildlife corridors were observed connecting the Project Site to off-site habitats when surveyed. There would be a less than significant impact to wildlife movement.

4.5 CRITICAL HABITAT

There is no designated critical habitat on or adjacent to the Project Site. There would be no impact to critical habitat.

5.0 CONCLUSION

The Project Site contains ruderal/disturbed and mixed conifer-hardwood forest habitat. The Project Site has potential to support 11 special-status plant species and two special-status animal species. No special-status species were observed during the site surveys. As nesting migratory birds are protected by the Migratory Bird Treaty Act, should construction occur during the nesting season (February 15 - September 15), a preconstruction nesting bird survey would be required by the USFWS. Implementation of **Mitigation Measure 1** will reduce potential impacts to migratory birds to a less-than-significant level. The Project Site contains suitable habitat for western gray squirrel; thus, implementation of **Mitigation Measure 2** would reduce potential impacts to western gray squirrel to a less-than-significant level.

DISCLAIMER. This report includes information that the Washington Department of Fish and Wildlife (WDFW) maintains in a central computer database. It is not an attempt to provide you with an official agency response as to the impacts of your project on fish and wildlife. This information only documents the location of fish and wildlife resources to the best of our knowledge. It is not a complete inventory and it is important to note that fish and wildlife resources may occur in areas not currently known to WDFW biologists, or in areas for which comprehensive surveys have not been conducted. Site specific surveys are frequently necessary to rule out the presence of priority resources. Locations of fish and wildlife resources are subject to variation caused by disturbance, changes in season and weather, and other factors. WDFW does not recommend using reports more than six months old.

participants

Custom Soil Resource Report for Thurston County Area, Washington

Preface

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<https://offices.sc.egov.usda.gov/locator/app?agency=nrcs>) or your NRCS State Soil Scientist (http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

The U.S. Department of Agriculture (USDA) prohibits discrimination in all its programs and activities on the basis of race, color, national origin, age, disability, and where applicable, sex, marital status, familial status, parental status, religion, sexual orientation, genetic information, political beliefs, reprisal, or because all or a part of an individual's income is derived from any public assistance program. (Not all prohibited bases apply to all programs.) Persons with disabilities who require

alternative means for communication of program information (Braille, large print, audiotape, etc.) should contact USDA's TARGET Center at (202) 720-2600 (voice and TDD). To file a complaint of discrimination, write to USDA, Director, Office of Civil Rights, 1400 Independence Avenue, S.W., Washington, D.C. 20250-9410 or call (800) 795-3272 (voice) or (202) 720-6382 (TDD). USDA is an equal opportunity provider and employer.

How Soil Surveys Are Made

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

Custom Soil Resource Report

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

Custom Soil Resource Report

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

Soil Map

The soil map section includes the soil map for the defined area of interest, a list of soil map units on the map and extent of each map unit, and cartographic symbols displayed on the map. Also presented are various metadata about data used to produce the map, and a description of each soil map unit.

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
 Web Soil Survey URL:
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Thurston County Area, Washington
 Survey Area Data: Version 15, Aug 31, 2021

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jul 18, 2020—Jul 30, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
2	Alderwood gravelly sandy loam, 8 to 15 percent slopes	55.8	29.9%
33	Everett very gravelly sandy loam, 8 to 15 percent slopes	12.9	6.9%
46	Indianola loamy sand, 0 to 5 percent slopes	7.6	4.1%
110	Spanaway gravelly sandy loam, 0 to 3 percent slopes	110.1	59.1%
Totals for Area of Interest		186.3	100.0%

Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

Custom Soil Resource Report

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

Thurston County Area, Washington

2—Alderwood gravelly sandy loam, 8 to 15 percent slopes

Map Unit Setting

National map unit symbol: 2t626
Elevation: 50 to 800 feet
Mean annual precipitation: 20 to 60 inches
Mean annual air temperature: 46 to 52 degrees F
Frost-free period: 160 to 240 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition

Alderwood and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Alderwood

Setting

Landform: Hills, ridges
Landform position (two-dimensional): Shoulder
Landform position (three-dimensional): Nose slope, talf
Down-slope shape: Convex, linear
Across-slope shape: Convex
Parent material: Glacial drift and/or glacial outwash over dense glaciomarine deposits

Typical profile

A - 0 to 7 inches: gravelly sandy loam
Bw1 - 7 to 21 inches: very gravelly sandy loam
Bw2 - 21 to 30 inches: very gravelly sandy loam
Bg - 30 to 35 inches: very gravelly sandy loam
2Cd1 - 35 to 43 inches: very gravelly sandy loam
2Cd2 - 43 to 59 inches: very gravelly sandy loam

Properties and qualities

Slope: 8 to 15 percent
Depth to restrictive feature: 20 to 39 inches to densic material
Drainage class: Moderately well drained
Capacity of the most limiting layer to transmit water (Ksat): Very low to moderately low (0.00 to 0.06 in/hr)
Depth to water table: About 18 to 37 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Very low (about 2.7 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4s
Hydrologic Soil Group: B
Ecological site: F002XA004WA - Puget Lowlands Forest
Forage suitability group: Limited Depth Soils (G002XN302WA), Limited Depth Soils (G002XS301WA), Limited Depth Soils (G002XF303WA)

Custom Soil Resource Report

Other vegetative classification: Limited Depth Soils (G002XN302WA), Limited Depth Soils (G002XS301WA), Limited Depth Soils (G002XF303WA)
Hydric soil rating: No

Minor Components

Indianola

Percent of map unit: 5 percent
Landform: Terraces, kames, eskers
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

Everett

Percent of map unit: 5 percent
Landform: Moraines, eskers, kames
Landform position (two-dimensional): Shoulder, footslope
Landform position (three-dimensional): Crest, base slope
Down-slope shape: Convex
Across-slope shape: Convex
Hydric soil rating: No

Shalcar

Percent of map unit: 3 percent
Landform: Depressions
Landform position (three-dimensional): Dip
Down-slope shape: Concave
Across-slope shape: Concave
Hydric soil rating: Yes

Norma

Percent of map unit: 2 percent
Landform: Drainageways, depressions
Landform position (three-dimensional): Dip
Down-slope shape: Linear, concave
Across-slope shape: Concave
Hydric soil rating: Yes

33—Everett very gravelly sandy loam, 8 to 15 percent slopes

Map Unit Setting

National map unit symbol: 2t62b
Elevation: 30 to 900 feet
Mean annual precipitation: 35 to 91 inches
Mean annual air temperature: 48 to 52 degrees F
Frost-free period: 180 to 240 days
Farmland classification: Farmland of statewide importance

Map Unit Composition

Everett and similar soils: 80 percent

Custom Soil Resource Report

Minor components: 20 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Everett

Setting

Landform: Moraines, eskers, kames
Landform position (two-dimensional): Shoulder, footslope
Landform position (three-dimensional): Crest, base slope
Down-slope shape: Convex
Across-slope shape: Convex
Parent material: Sandy and gravelly glacial outwash

Typical profile

O_i - 0 to 1 inches: slightly decomposed plant material
A - 1 to 3 inches: very gravelly sandy loam
B_w - 3 to 24 inches: very gravelly sandy loam
C₁ - 24 to 35 inches: very gravelly loamy sand
C₂ - 35 to 60 inches: extremely cobbly coarse sand

Properties and qualities

Slope: 8 to 15 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat excessively drained
Capacity of the most limiting layer to transmit water (K_{sat}): High (1.98 to 5.95 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 3.2 inches)

Interpretive groups

Land capability classification (irrigated): None specified
Land capability classification (nonirrigated): 4s
Hydrologic Soil Group: A
Ecological site: F002XA004WA - Puget Lowlands Forest
Forage suitability group: Droughty Soils (G002XN402WA), Droughty Soils (G002XS401WA), Droughty Soils (G002XF403WA)
Other vegetative classification: Droughty Soils (G002XN402WA), Droughty Soils (G002XS401WA), Droughty Soils (G002XF403WA)
Hydric soil rating: No

Minor Components

Alderwood

Percent of map unit: 10 percent
Landform: Hills, ridges
Landform position (two-dimensional): Shoulder
Landform position (three-dimensional): Nose slope, talf
Down-slope shape: Convex, linear
Across-slope shape: Convex
Hydric soil rating: No

Indianola

Percent of map unit: 10 percent
Landform: Terraces, kames, eskers
Landform position (three-dimensional): Riser

Custom Soil Resource Report

Down-slope shape: Linear
Across-slope shape: Linear
Hydric soil rating: No

46—Indianola loamy sand, 0 to 5 percent slopes

Map Unit Setting

National map unit symbol: 2t62k
Elevation: 0 to 980 feet
Mean annual precipitation: 30 to 81 inches
Mean annual air temperature: 48 to 50 degrees F
Frost-free period: 170 to 210 days
Farmland classification: Prime farmland if irrigated

Map Unit Composition

Indianola and similar soils: 85 percent
Minor components: 15 percent
Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Indianola

Setting

Landform: Terraces, kames, eskers
Landform position (three-dimensional): Tread
Down-slope shape: Linear
Across-slope shape: Linear
Parent material: Sandy glacial outwash

Typical profile

Oi - 0 to 1 inches: slightly decomposed plant material
A - 1 to 6 inches: loamy sand
Bw1 - 6 to 17 inches: loamy sand
Bw2 - 17 to 27 inches: sand
BC - 27 to 37 inches: sand
C - 37 to 60 inches: sand

Properties and qualities

Slope: 0 to 5 percent
Depth to restrictive feature: More than 80 inches
Drainage class: Somewhat excessively drained
Capacity of the most limiting layer to transmit water (Ksat): High to very high (5.95 to 99.90 in/hr)
Depth to water table: More than 80 inches
Frequency of flooding: None
Frequency of ponding: None
Available water supply, 0 to 60 inches: Low (about 3.9 inches)

Interpretive groups

Land capability classification (irrigated): 4s
Land capability classification (nonirrigated): 4s
Hydrologic Soil Group: A

Custom Soil Resource Report

Ecological site: F002XA004WA - Puget Lowlands Forest

Forage suitability group: Droughty Soils (G002XV402WA), Droughty Soils (G002XF403WA), Droughty Soils (G002XS401WA), Droughty Soils (G002XN402WA)

Other vegetative classification: Droughty Soils (G002XV402WA), Droughty Soils (G002XF403WA), Droughty Soils (G002XS401WA), Droughty Soils (G002XN402WA)

Hydric soil rating: No

Minor Components

Alderwood

Percent of map unit: 8 percent

Landform: Hills, ridges

Landform position (two-dimensional): Summit

Landform position (three-dimensional): Crest, talus

Down-slope shape: Convex, linear

Across-slope shape: Convex

Hydric soil rating: No

Everett

Percent of map unit: 5 percent

Landform: Moraines, eskers, kames

Landform position (two-dimensional): Summit, shoulder

Landform position (three-dimensional): Crest, interfluvium

Down-slope shape: Convex

Across-slope shape: Convex

Hydric soil rating: No

Norma

Percent of map unit: 2 percent

Landform: Drainageways, depressions

Landform position (three-dimensional): Dip

Down-slope shape: Linear, concave

Across-slope shape: Concave

Hydric soil rating: Yes

110—Spanaway gravelly sandy loam, 0 to 3 percent slopes

Map Unit Setting

National map unit symbol: 2ndb6

Elevation: 330 to 1,310 feet

Mean annual precipitation: 35 to 65 inches

Mean annual air temperature: 50 degrees F

Frost-free period: 150 to 200 days

Farmland classification: Prime farmland if irrigated

Map Unit Composition

Spanaway and similar soils: 100 percent

Estimates are based on observations, descriptions, and transects of the mapunit.

Description of Spanaway

Setting

Landform: Terraces, outwash plains

Parent material: Volcanic ash over gravelly outwash

Typical profile

H1 - 0 to 15 inches: gravelly sandy loam

H2 - 15 to 20 inches: very gravelly loam

H3 - 20 to 60 inches: extremely gravelly sand

Properties and qualities

Slope: 0 to 3 percent

Depth to restrictive feature: More than 80 inches

Drainage class: Somewhat excessively drained

Capacity of the most limiting layer to transmit water (Ksat): High (1.98 to 5.95 in/hr)

Depth to water table: More than 80 inches

Frequency of flooding: None

Frequency of ponding: None

Available water supply, 0 to 60 inches: Low (about 3.8 inches)

Interpretive groups

Land capability classification (irrigated): 3s

Land capability classification (nonirrigated): 3s

Hydrologic Soil Group: A

Ecological site: R002XA006WA - Puget Lowlands Prairie

Forage suitability group: Droughty Soils (G002XS401WA)

Other vegetative classification: Droughty Soils (G002XS401WA)

Hydric soil rating: No

ATTACHMENT D

SPECIES OBSERVED

Species Observed During Biological Resources Surveys

April 12 to 14 and June 16 to 18, 2021

Scientific Name	Common Name
Plants	
<i>Cytisus scoparius</i>	Scotch broom
<i>Leucanthemum vulgare</i>	Oxeye daisy
<i>Digitalis purpurea</i>	Foxglove
<i>Rubus spp.</i>	Blackberry
<i>Hypericum perforatum</i>	St. John's wort
<i>Pseudotsuga menziesii</i>	Douglas fir
<i>Quercus garryana</i>	Oregon white oak
<i>Cynodon dactylon</i>	Bermuda grass
<i>Lolium multiflorum</i>	Italian ryegrass
<i>Holodiscus discolor</i>	Oceanspray
<i>Gaultheria shallon</i>	Salal
<i>Spiraea douglasii</i>	Hardhack
Wildlife	
<i>Cathartes aura</i>	Turkey vulture
<i>Buteo jamaicensis</i>	Red-tailed hawk
<i>Turdus migratorius</i>	American robin
<i>Falco sparverius</i>	American kestrel
<i>Corvus corax</i>	common raven
<i>Poecile rufescens</i>	Chestnut-backed chickadee
<i>Junco hyemalis</i>	Dark-eyed junco
<i>Zonotrichia leucophrys</i>	White-crowned sparrow
<i>Haemorhous mexicanus</i>	House finch
<i>Spinus tristis</i>	American goldfinch
